

M10478 & M10578 Modules MTK NMEA Packet Commands

MTK NMEA Packet Format

Preamble	TalkerID PktTyp	DataField	*	СНК1	СНК2	CR	LF
----------	-----------------	-----------	---	------	------	----	----

Packet Length:

The maximum length of each packet is restricted to 255 bytes

Packet Contents:

Preamble: One byte character.

'\$

TalkerID: Four bytes character string.

"PMTK"

PktType: Three bytes character string.

From "000" to "999"

An identifier used to tell the decoder how to decode the packet

DataField: The DataField has variable length depending on the packet type.

A comma symbol ',' must be inserted ahead each data filed to help the decoder process the DataField.

*: 1 byte character.

The star symbol is used to mark the end of DataField.

CHK1, CHK2: Two bytes character string.

CHK1 and CHK2 are the checksum of the data between Preamble and '*'.

CR, LF: Two bytes binary data.

The two bytes are used to identify the end of a packet.

Sample Packet:

\$PMTK000*32<CR><LF>

MTK NMEA Packet Protocol:

In order to inform the sender whether the receiver has received the packet, an acknowledge packet PMTK_ACK should return after the receiver receives a packet.

Due to hardware limitation, the maximum power down duration (SLEEP) is 2047 seconds. If the configured "SLEEP" interval is larger than 2047 seconds, GPS firmware will automatically extend the interval by software method. However, GPS sytem will be powered on for the interval extension and powered down again after the extension is done.
